

How to Create a Public Webpage

From the **Admin Dropdown**, select **Public Webpage** 1.

Select a **Project** and **Camera** from the corresponding dropdowns 2.

Set your camera as **Available to Public** 3.

In the **Player Preview**, select your **Direct URL** on the right to generate a URL you can **Share** 4.

* **Customize URL** brings you to Advanced Settings to create a Custom or Private URL.

Custom URL
By creating a custom URL, you could brand your link and make it easier for your users to find, remember, and share your page.

Private URL
Your standalone page link will be an obfuscated URL, which is nearly impossible to guess, yet still public and available to share privately.

By creating a **custom URL name**, you could brand your link and make it easier for your users to find, remember, and share your page.

Thank you for your continued support.
